1 measure (4g Epaderm Cream)

How Epaderm® Cream works

Epaderm® Cream is an emollient formulated with clinically proven ingredients that can be used on the skin or as a skin cleanser.

In a recent study, over 85% of health care professionals noticed an improvement of the dry skin and nearly 85% of patients had an improvement in the skin softness after four weeks of Epaderm Cream use¹.

By providing a film barrier, Epaderm Cream aids moisture retention within the skin. This product relieves dry skin symptoms by improving rough and scaly, dry skin¹.

Emollients are particularly helpful for people with dry skin, which is often the cause of widespread itch; they are especially effective if applied immediately after washing or swimming². Emollients can help to reduce the risk of skin tears³.
